**Microsoft publishes case study on HSAGlobal customer
Mangere Community Health Trust*****New Zealand primary & community health provider implementing CCMS***

Auckland, New Zealand – The healthcare industry customer solutions group of Microsoft recently published a case study on influential New Zealand primary health provider Mangere Community Health Trust (CHT). Microsoft's case study details the implementation at Mangere CHT of HSAGlobal's Collaborative Care Management Solution (CCMS), a unified electronic system that manages longitudinal medical records and care management for patients with long-term conditions.

The case study can be read online at:

http://www.microsoft.com/casestudies/Case_Study_Detail.aspx?casestudyid=4000005157

CCMS is an electronic health record and clinical case management system that makes integrated patient information available at the point-of-care via PC, laptop, tablet or mobile devices. CCMS is used by healthcare provider organizations to manage long term conditions and chronic disease, "closing the loop" to link patient, care provider, service manager and funder, wherever they are located. CCMS enables healthcare organizations to improve client care while creating clinical and business efficiencies.

About Mangere Community Health Trust

Mangere Community Health Trust's services are designed to improve the health and well-being of the people of Mangere, Auckland, New Zealand. The Mangere Community Health Trust was formed in 1992 and together with its sister organisation, the Mangere Health Resources Trust, forms an important part in the management and delivery of health services in Mangere. These services include chronic care management, retinal screening, cervical screening, immunisations, xray, tattoo removal, antenatal smoking services, mental health and nutrition service.
